

KOMPO UTD-01

VOLUMETRIC PRECISE DOSING MACHINE

Precise dosing machine UTD-01 is used for an increased accuracy of dosing during production of boiled sausages, pastes, processed cheese and other fillings with past-like consistency without any inclusions at cut. Used with screw fillers and automatic clippers KOMPO only.

Technical specifications:

Model	UTD-01
Dose range adjustment, gr	100-1000
Dose precision, %	±1
Air consumption, liters/cycle	1,82
Dimensions, mm:	
Length*Width*Height	960*650*1460
Net weight, kg	85

ADVANTAGES:

- increase performance of the line;
- minimum time required for setup and maintenance;
- simple sanitary maintenance;
- the line equipment is controlled by one operator;
- reliability and low operating costs.
